Skills

JavaScript
Python
C#
React
Remix
HTML/CSS
REST API
Git
Node.js
MySQL
MSSQL
Linux
PHP
LAMPP
Excel
Power BI

Hobbies

Gaming:

Starcraft 2
Rust
Street
Fighter 6
Escape
From Tarkov

Shade tree
mechanic
Music
enjoyer
Food lover

Goals

After being locked in a server room of a manufacturing environment for the past three years, I survived by navigating my way through databases using SQL and Python Pandas, serving data through REST API's in the Remix React framework along with CSV's, Excel, and JSON's. I find myself yearning for a new challenge. I'm hoping to find a team to collaborate beside, learn from, and grow with.

Experience

Paradigm Manufacturing

2022-Present Lead Software Engineer

Lead Software Engineer

Responsible for thousands of data pulls using MSSQL, APIs, OCR (Tesseract), and webscraping; manipulating data with Python, JavaScript, and C#; serving data in CSVs, Excel, our manufacturing ERP software, and our in house apps.

I created several in-house applications to facilitate the manufacturing process by accelerating the data pipeline, part scheduling, data visualization, and providing work center management tools.

My duties, responsibilities, and accomplishments include but are not limited to:

- Collaborating with management, departments, and customers to identify end-user requirements and specifications.
- Designing, developing, and maintaining applications using Python/Selenium/Pandas, Optical Character Recognition (Tesseract), HTML/CSS/Javascript/React/Remix, Node.js, SQL, C#, and other technologies.
- Supporting data extract/transform/load (ETL) systems
- Implementing front-end user interfaces using modern technologies.
- Building and maintaining APIs to facilitate communication between front-end and back-end systems.
- Coordinating End-User training upon system deployments
- Participating in Voice-of-Customer reviews with End-Users to generate enhancement strategies
- Optimizing applications for maximum speed and scalability.
- Staying up-to-date with emerging technologies and industry trends to continuously improve our development processes and products.
- Troubleshooting and resolving technical issues as they arise.
- Performing unit testing, debugging, and code reviews to ensure the quality and reliability of software applications.

Freelance

2020-2022

Web Developer

Web development from the top to the bottom. Front-end and back-end implementation of PHP to construct websites and drive data through MySQL databases. Designed and built from scratch databases to be used managing user data, facilitate bookkeeping, construct forms and receipts, or collect and store feedback.

Personal Projects

Developing a delivery game as a hobby using OOP with vanilla JavaScript. This uses mostly JavaScript with HTML/CSS. I assembled the art using Tiled for the maps and Aesprite for the characters/objects. Check out "PokeDasher" on my website and inspect the code via my GitHub.

Education

St. Joseph High School - Victoria, Tx

Austin Community College: CompSci - Austin, Tx
